AIGP Module 6 Advanced Practice Test

The EU AI Act

30 Medium to Hard Questions (Exam Simulation)

Question 1

According to the EU AI Act, which entities must comply with the regulation even if they are NOT located in the EU?

A. Only EU-based companies
B. Organizations offering AI services or products to EU customers, including providers, importers, and distributors from third countries
C. Only companies with EU subsidiaries
D. No non-EU organizations need to comply

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Even non-EU organizations must comply with the Act if offering AI services or products to EU customers... Organizations outside the EU that wish to market their AI systems or services to EU customers are directly affected by the Act. This includes providers, importers and distributors from third countries who must ensure compliance with the Act before their AI systems can be legally deployed in the EU."
- **Why A is incorrect:** The EU AI Act has extraterritorial reach affecting non-EU organizations that offer AI to EU customers, not just EU-based companies.
- **Why C is incorrect:** Having an EU subsidiary isn't the determining factor. Non-EU companies without EU subsidiaries must still comply if they offer AI to EU customers.
- **Why D is incorrect:** The training explicitly states non-EU organizations must comply when offering AI to EU customers, demonstrating extraterritorial application.

Question 2

The EU AI Act uses a risk-based approach to classify AI systems. How many risk categories does it establish?

A. Two categories
B. Three categories
C. Four categories
D. Five categories

Correct Answer: C

Narahari

Explanation:

- **Why C is correct:** The training explicitly states: "The Act classifies AI systems into four different categories: 1. Prohibited risk (sometimes listed as 'unacceptable'), 2. High risk, 3. Limited risk (AI systems with transparency risks), 4. Minimal or no risk."
- **Why A is incorrect:** Four categories exist, not two. The Act distinguishes between prohibited, high, limited, and minimal/no risk.
- **Why B is incorrect:** There are four distinct categories, not three. Each has different regulatory requirements.
- **Why D is incorrect:** The classification system has four categories, not five.

Question 3

According to the EU AI Act, which of the following AI practices is explicitly PROHIBITED?

A. Spam filters
B. Social credit scoring systems
C. Inventory management systems
D. AI-enabled video games

Correct Answer: B

Explanation:

- **Why B is correct:** The training lists prohibited practices including "Social credit scoring systems" which cannot be placed on the EU market under any circumstances.
- **Why A is incorrect:** Spam filters are listed as examples of "Minimal or no risk AI systems" with "Virtually no restrictions on use or development."
- **Why C is incorrect:** Inventory management systems are also listed as examples of minimal/no risk systems with no substantive restrictions.
- **Why D is incorrect:** AI-enabled video games are explicitly mentioned as minimal/no risk examples, not prohibited systems.

Question 4

Under the EU AI Act, which AI practice involving biometrics is generally prohibited, with only limited, pre-authorized exceptions?

A. Biometric authentication for smartphone unlocking
B. Real-time biometric identification by law enforcement in publicly accessible spaces
C. Biometric data encryption
D. Biometric data storage with consent

Correct Answer: B

Explanation:

Narahari

- **Why B is correct:** The training explicitly states as prohibited: "Real-time biometric identification by law enforcement in publicly accessible spaces, except certain limited, pre-authorized situations."
- **Why A is incorrect:** Smartphone biometric authentication for personal device security isn't mentioned as prohibited. The prohibition focuses on law enforcement surveillance in public spaces.
- **Why C is incorrect:** Encryption is a security measure, not a prohibited practice. The prohibition concerns real-time identification by law enforcement.
- **Why D is incorrect:** Storage with consent isn't prohibited. The specific prohibition is real-time identification by law enforcement in public spaces without authorization.

Question 5

According to the EU AI Act, what is required before deployers of high-risk AI systems used in services of general interest (banks, schools, hospitals, insurers) can put the system into use?

A. Only financial audit
B. Complete a Fundamental Rights Impact Assessment (FRIA)
C. Only marketing approval
D. No assessment is required

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Complete a Fundamental Rights Impact Assessment (FRIA) before putting AI systems into use (for services of general interest like banks, schools, hospitals and insurers, for high-risk systems). Deployers are responsible for assessing the potential impact of their high-risk AI systems on fundamental rights, including privacy, non-discrimination and freedom of expression."
- **Why A is incorrect:** Financial audits aren't the required assessment. The FRIA focuses on fundamental rights impacts, not financial performance.
- **Why C is incorrect:** Marketing approval isn't mentioned as a requirement. The FRIA assesses rights impacts, not marketing strategy.
- **Why D is incorrect:** The training explicitly requires FRIAs for deployers of high-risk AI in services of general interest before use.

Question 6

Under Article 9 of the EU AI Act, what must providers of high-risk AI systems implement?

A. Only marketing plans
B. A risk management system to identify, analyze, and mitigate risks

Narahari

C. Only user training programs
D. No specific requirements under Article 9

Correct Answer: B

Explanation:

- **Why B is correct:** The training explicitly states: "Implement a risk management system (Article 9) - Identify and analyze risks of the AI system; add measures to minimize and mitigate risk."
- **Why A is incorrect:** Article 9 mandates risk management systems, not marketing plans. Risk management focuses on safety and compliance, not promotion.
- **Why C is incorrect:** While training may be part of broader compliance, Article 9 specifically requires a risk management system for identifying and mitigating risks.
- **Why D is incorrect:** The training clearly identifies Article 9 as requiring implementation of a risk management system for high-risk AI.

Question 7

According to Article 10 of the EU AI Act, what are the data governance requirements for high-risk AI systems?

A. No data requirements exist
B. Ensure input data is relevant, free of errors, representative, complete, and examine for biases
C. Only collect as much data as possible
D. Data quality doesn't matter

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Manage data and data governance (Article 10) - Ensure input data is relevant for the purpose, free of errors, representative and complete. Robust data management: collection, annotation, labelling, cleaning; examination for biases."
- **Why A is incorrect:** Article 10 specifically establishes comprehensive data governance requirements for high-risk AI systems.
- **Why C is incorrect:** The requirement is for relevant, quality data, not maximum volume. Data minimization principles apply—collect what's necessary and appropriate.
- **Why D is incorrect:** Data quality is explicitly required under Article 10. Input data must be error-free, representative, and complete.

Question 8

Under Article 14 of the EU AI Act, what capability must high-risk AI systems provide regarding human oversight?

Narahari

A. Eliminate all human involvement
B. Humans must be able to oversee, understand, interpret, and intervene to stop or override AI outputs
C. Only automated oversight is permitted
D. Human oversight is optional

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Develop the system in a way that allows for human oversight (Article 14) - Humans must be able to oversee processes and understand how the AI system works, understand and interpret output and intervene to stop or override the AI outputs."
- **Why A is incorrect:** Article 14 requires human oversight capabilities, not elimination of human involvement. Humans must be able to intervene and override.
- **Why C is incorrect:** The article specifically requires human oversight capabilities, not just automated monitoring. Humans must be able to understand and intervene.
- **Why D is incorrect:** Human oversight is mandatory for high-risk AI systems under Article 14, not optional.

Question 9

According to the EU AI Act, how long must event logs for high-risk AI systems be retained?

A. 24 hours
B. One week
C. A minimum of six months
D. Forever

Correct Answer: C

Explanation:

- **Why C is correct:** The training states: "Event logging (period of use, databases referenced, input data, identity of human verifiers, etc.) to be retained for a minimum of six months."
- **Why A is incorrect:** 24 hours is insufficient. The Act requires minimum six-month retention for accountability and investigation purposes.
- **Why B is incorrect:** One week is too short. The minimum retention period is six months to enable meaningful auditing and incident investigation.
- **Why D is incorrect:** While longer retention may be required by other laws, the EU AI Act specifies a minimum of six months, not indefinite retention.

Question 10

Narahari

Under Article 17 of the EU AI Act, what must providers of high-risk AI systems create?

A. Only marketing materials
B. A Quality Management System (QMS) covering all aspects of the AI system's life cycle
C. Only financial reports
D. No specific system is required

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Create a quality management system (Article 17) - Providers of high-risk AI systems must implement a quality management system (QMS) that covers all aspects of the AI system's life cycle. Includes processes for ensuring compliance with regulatory standards, design and development controls, post-market monitoring and system validation."
- **Why A is incorrect:** Article 17 requires a comprehensive QMS for life cycle management, not marketing materials.
- **Why C is incorrect:** Financial reports may be part of business operations, but Article 17 specifically requires a QMS for regulatory compliance and system quality.
- **Why D is incorrect:** The training explicitly identifies Article 17 as requiring creation and implementation of a QMS.

Question 11

According to the EU AI Act, what must providers do before placing a high-risk AI system on the market?

A. Only create marketing materials
B. Conduct a conformity assessment to demonstrate compliance and register the system in the EU database
C. No specific actions required
D. Only notify competitors

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Undertake a conformity assessment (Article 43): Before placing a high-risk AI system on the market, providers must conduct a conformity assessment to demonstrate compliance with the EU AI Act" and "Providers must register prior to placing system on the market" in the public EU database.
- **Why A is incorrect:** Pre-market requirements focus on compliance demonstration through conformity assessment and registration, not marketing materials.
- **Why C is incorrect:** The training explicitly requires conformity assessment and database registration before market placement.

Narahari

- **Why D is incorrect:** Competitor notification isn't a requirement. The requirements are conformity assessment and registration in the EU public database.

Question 12

Under the EU AI Act, which role has "the most extensive obligations" because they "control the design, testing and risk mitigation strategies"?

A. Deployer
B. Provider
C. Importer
D. Distributor

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Provider: The entity or organization that develops and makes AI systems available on the market... Providers have the most extensive obligations under the EU AI Act because they control the design, testing and risk mitigation strategies for AI systems."
- **Why A is incorrect:** Deployers have "fewer obligations compared to providers" according to the training, though they still have significant responsibilities.
- **Why C is incorrect:** Importers have obligations focused on ensuring compliance when bringing systems to the EU market, but not the most extensive obligations overall.
- **Why D is incorrect:** Distributors have verification and documentation obligations, but these are narrower than provider obligations for design, testing, and risk mitigation.

Question 13

According to the EU AI Act, what is the definition of a "deployer"?

A. The entity that develops AI systems
B. The entity or professional user who applies an AI system for a specific purpose or goal
C. The entity that imports AI from third countries
D. The entity that distributes AI on the market

Correct Answer: B

Explanation:

- **Why B is correct:** The training defines deployer as: "The entity or professional user who applies an AI system for a specific purpose or goal. Responsibilities: Deployers are primarily responsible for the safe and ethical use of AI systems in their operations."
- **Why A is incorrect:** This describes a provider, not a deployer. Providers develop and make systems available; deployers use them.

Narahari

- **Why C is incorrect:** This describes an importer. Importers bring AI systems into the EU market from third countries.
- **Why D is incorrect:** This describes a distributor. Distributors make systems available on the market but aren't the providers or importers.

Question 14

Under the EU AI Act, which of the following is a prohibited AI practice specifically mentioned for workplaces and educational institutions?

A. Productivity monitoring software
B. Emotion-recognition systems
C. Time tracking applications
D. Email filtering systems

Correct Answer: B

Explanation:

- **Why B is correct:** The training explicitly lists as prohibited: "Emotion-recognition systems in workplaces and education institutions."
- **Why A is incorrect:** General productivity monitoring isn't specifically prohibited. The prohibition targets emotion-recognition systems that invade privacy and potentially discriminate.
- **Why C is incorrect:** Time tracking applications aren't mentioned as prohibited. The specific prohibition is emotion-recognition in workplaces and education.
- **Why D is incorrect:** Email filtering (like spam filters) is actually mentioned as a minimal/no risk system, not a prohibited practice.

Question 15

According to the EU AI Act, what must general-purpose AI (GPAI) model providers establish in the EU?

A. A manufacturing facility
B. An authorized representative appointed by written mandate (similar to GDPR EU representative)
C. A retail store
D. No EU presence required

Correct Answer: B

Explanation:

- **Why B is correct:** The training states for GPAI obligations: "Authorized representative: must be established in the EU and appointed by written mandate (similar to GDPR EU representative)."

Narahari

- **Why A is incorrect:** Manufacturing facilities aren't required. The requirement is for an authorized representative to handle regulatory matters.
- **Why C is incorrect:** Retail presence isn't required. The EU representative requirement ensures regulatory accountability, not commercial presence.
- **Why D is incorrect:** The training explicitly requires GPAI providers to establish an authorized representative in the EU by written mandate.

Question 16

What additional obligations do high-impact GPAI models "with systemic risk" have beyond standard GPAI requirements?

A. Only marketing obligations
B. Assess model performance, assess and mitigate systemic risks, conduct adversarial training (red-teaming), ensure security protections, and report energy consumption
C. No additional obligations
D. Only financial reporting

Correct Answer: B

Explanation:

- **Why B is correct:** The training states for GPAI with systemic risk: "Assessing model performance. Assessing and mitigating systemic risks. Documenting and reporting serious incidents and action(s) taken. Conducting adversarial training of the model (also known as 'red-teaming'). Ensuring security and physical protections are in place. Reporting the model's energy consumption."
- **Why A is incorrect:** The additional obligations are technical and safety-focused (performance assessment, risk mitigation, red-teaming, security, energy reporting), not marketing.
- **Why C is incorrect:** High-impact GPAI models have substantial additional obligations beyond standard GPAI requirements.
- **Why D is incorrect:** While reporting is required, it's for serious incidents and energy consumption, not general financial reporting.

Question 17

Under the EU AI Act, what timeframe applies to the prohibition on AI systems in the "unacceptable risk" category?

A. These prohibitions apply 6 months after the Act entered into force (2 February 2025)
B. These prohibitions apply 12 months after the Act entered into force
C. These prohibitions apply 24 months after the Act entered into force
D. No prohibitions take effect

Correct Answer: A

Narahari

Explanation:

- **Why A is correct:** The training states: "6 months out (2 February 2025): prohibitions on AI in 'unacceptable risk' category."
- **Why B is incorrect:** 12 months is when rules for notified bodies, GPAI, governance, confidentiality, and penalties apply, not prohibitions.
- **Why C is incorrect:** 24-36 months is when most remaining obligations apply, but prohibitions take effect much earlier at 6 months.
- **Why D is incorrect:** Prohibitions explicitly take effect 6 months after the Act entered into force.

Question 18

According to the EU AI Act, what is the maximum penalty for using prohibited AI?

A. €1 million
B. €10 million or 2% of global turnover
C. €35 million or 7% of global turnover for the preceding fiscal year
D. No penalties exist

Correct Answer: C

Explanation:

- **Why C is correct:** The training states: "Highest penalty for using prohibited AI: up to 35,000,000 € or up to seven percent of global turnover for the preceding fiscal year."
- **Why A is incorrect:** €1 million is far below the actual maximum penalty, which can reach €35 million or 7% of global turnover.
- **Why B is incorrect:** These figures are below the actual maximum. €15 million or 3% applies to other noncompliance, not prohibited AI.
- **Why D is incorrect:** The training explicitly establishes penalties, with the highest being €35 million or 7% of global turnover for prohibited AI use.

Question 19

Under the EU AI Act, what penalty applies for instances of noncompliance OTHER than using prohibited AI?

A. No penalties
B. €35 million or 7% of global turnover
C. €15 million or 3% of global turnover
D. Only warnings

Correct Answer: C

Explanation:

Narahari

- **Why C is correct:** The training states: "Lower penalty for other instances of noncompliance: up to 15,000,000 € or up to three percent of global turnover."
- **Why A is incorrect:** Penalties exist for noncompliance. The Act establishes a structured penalty framework.
- **Why B is incorrect:** These higher penalties (€35 million/7%) apply specifically to prohibited AI use, not other noncompliance.
- **Why D is incorrect:** While warnings may be issued, the Act establishes financial penalties of up to €15 million or 3% for other noncompliance.

Question 20

According to the EU AI Act, which AI systems are subject to transparency obligations requiring users to be informed they are interacting with AI?

A. Only high-risk systems
B. Limited risk systems such as chatbots, automated email replies, and deepfakes
C. Only prohibited systems
D. No systems require user notification

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Transparency obligations for providers and deployers of certain AI systems... Providers must ensure users are informed when they interact with an AI system, particularly if it may influence decision-making without awareness. User notification required for AI-driven content or recommendation systems (e.g., chatbots, automated email replies, deepfakes)."
- **Why A is incorrect:** While high-risk systems have extensive requirements, the specific transparency obligation for user notification about AI interaction applies to limited risk systems like chatbots and deepfakes.
- **Why C is incorrect:** Prohibited systems cannot be used at all, so user notification is irrelevant. The transparency obligations apply to permitted limited risk systems.
- **Why D is incorrect:** The training explicitly requires user notification for certain AI systems, particularly limited risk systems that interact with users.

Question 21

Under the EU AI Act, what must be done with visual or audio deepfakes?

A. They are automatically prohibited
B. They must be labeled to indicate they are AI-generated
C. No special requirements apply
D. They can only be used by governments

Correct Answer: B

Narahari

Explanation:

- **Why B is correct:** The training states: "Visual or audio deepfakes must be labeled" as part of transparency obligations.
- **Why A is incorrect:** Deepfakes aren't automatically prohibited. They require labeling for transparency, but can be used if properly disclosed.
- **Why C is incorrect:** Special labeling requirements specifically apply to deepfakes to ensure users know the content is AI-generated.
- **Why D is incorrect:** Deepfakes aren't restricted to government use. They must be labeled when used by any entity to ensure transparency.

Question 22

According to Article 4 of the EU AI Act, what must providers and deployers ensure regarding AI literacy?

A. AI literacy is optional
B. Sufficient AI literacy of their staff and persons dealing with AI operations, considering technical knowledge, experience, and context
C. Only technical staff need AI literacy
D. AI literacy is only required for developers

Correct Answer: B

Explanation:

- **Why B is correct:** The training quotes Article 4: "Providers and deployers of AI systems shall take measures to ensure, to their best extent, a sufficient level of AI literacy of their staff and other persons dealing with the operation and use of AI systems on their behalf, taking into account their technical knowledge, experience, education and training and the context the AI systems are to be used in."
- **Why A is incorrect:** Article 4 makes AI literacy a requirement, not optional. Providers and deployers "shall take measures" to ensure sufficient literacy.
- **Why C is incorrect:** The requirement extends beyond technical staff to "other persons dealing with the operation and use of AI systems," not just technical personnel.
- **Why D is incorrect:** Both providers and deployers have AI literacy obligations for their staff and relevant persons, not just developers.

Question 23

Under the EU AI Act, what must providers of high-risk AI systems do regarding serious incidents?

A. Keep incidents confidential
B. Report serious incidents or malfunctions that could result in harm or breach fundamental rights to local market surveillance authorities

Narahari

C. Only report to internal management
D. No reporting is required

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "Providers must report any serious incidents or malfunctions that could result in harm or breach fundamental rights. Includes incidents where an AI system's malfunction leads to unintended discrimination, privacy breaches or other violations of fundamental rights" and "If an incident occurs: required to report to local market surveillance authority."
- **Why A is incorrect:** Transparency and accountability require reporting to authorities, not maintaining confidentiality. Serious incidents must be disclosed.
- **Why C is incorrect:** While internal reporting is important, the Act requires reporting to local market surveillance authorities, not just internal management.
- **Why D is incorrect:** The training explicitly requires serious incident reporting as part of provider obligations for high-risk AI systems.

Question 24

According to the EU AI Act, what is the EU-wide database for high-risk AI systems?

A. A private, confidential database
B. A public database accessible by anyone, operated by the European Commission, with data provided by providers
C. Only accessible to government agencies
D. No database exists

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "EU-wide database for high-risk AI systems • Public, accessible by anyone • Operated and owned by the European Commission • Data provided by providers."
- **Why A is incorrect:** The database is explicitly public and accessible by anyone, not private or confidential.
- **Why C is incorrect:** While government agencies can access it, the database is public and accessible by anyone, not restricted to agencies.
- **Why D is incorrect:** The training explicitly describes the EU-wide database as a requirement for registering high-risk AI systems.

Question 25

Narahari

Under the EU AI Act, which AI systems are described as having "virtually no restrictions on use or development" with possible voluntary codes of conduct?

A. High-risk systems
B. Prohibited systems
C. Minimal or no risk systems like spam filters and AI-enabled video games
D. All systems have equal restrictions

Correct Answer: C

Explanation:

- **Why C is correct:** The training states: "Minimal or no risk AI systems: Examples: spam filters, AI-enabled video games, inventory management systems. Virtually no restrictions on use or development. Codes of conduct may eventually be created by industry/specific use; these would be voluntary."
- **Why A is incorrect:** High-risk systems have extensive requirements including conformity assessments, documentation, human oversight, and registration.
- **Why B is incorrect:** Prohibited systems have the most restrictions—they cannot be placed on the market at all under any circumstances.
- **Why D is incorrect:** The risk-based approach creates different restriction levels, with minimal/no risk systems having virtually no restrictions while others have substantial requirements.

Question 26

According to the EU AI Act, what are deployers of high-risk AI systems required to do regarding monitoring?

A. No monitoring is required
B. Regularly monitor AI system performance to ensure it operates as intended
C. Only monitor financial performance
D. Monitoring is optional

Correct Answer: B

Explanation:

- **Why B is correct:** The training lists deployer obligations including: "Regularly monitor AI system performance to ensure it operates as intended."
- **Why A is incorrect:** The training explicitly includes regular monitoring as a deployer obligation for high-risk AI systems.
- **Why C is incorrect:** Performance monitoring refers to the AI system's technical operation and compliance, not financial performance.
- **Why D is incorrect:** Monitoring is a mandatory obligation for deployers of high-risk AI systems, not optional.

Narahari

Question 27

Under the EU AI Act, what obligation do importers have regarding high-risk AI systems from third countries?

A. No obligations
B. Ensure compliance before placing on the market, verify conformity assessment, and verify the system is registered
C. Only marketing obligations
D. Only financial obligations

Correct Answer: B

Explanation:

- **Why B is correct:** The training states importers must: "Ensure compliance before placing the AI system on the market; verify system has undergone required conformity assessment and is registered."
- **Why A is incorrect:** Importers have substantial obligations ensuring third-country AI systems meet EU requirements before market entry.
- **Why C is incorrect:** Importer obligations focus on compliance verification, not marketing activities.
- **Why D is incorrect:** While there may be financial aspects, importer obligations center on ensuring regulatory compliance, conformity assessment, and registration verification.

Question 28

According to the EU AI Act, which of the following is an example of a high-risk AI system?

A. Spam filters
B. AI systems used in recruitment and employment
C. AI-enabled video games
D. Inventory management systems

Correct Answer: B

Explanation:

- **Why B is correct:** The training identifies high-risk systems as those posing "significant risk to health, safety, or fundamental rights" including "education, employment" and specifically mentions "recruitment" under conformity assessment requirements.
- **Why A is incorrect:** Spam filters are explicitly listed as examples of "Minimal or no risk AI systems" with virtually no restrictions.
- **Why C is incorrect:** AI-enabled video games are also listed as minimal/no risk systems, not high-risk.
- **Why D is incorrect:** Inventory management systems are another example of minimal/no risk AI, not high-risk systems.

Narahari

Question 29

Under the EU AI Act, what type of systems are considered high-risk when used as safety components?

A. Only software systems
B. AI in regulated products like toys, machinery, medical devices, aviation, vehicles, railways
C. Only consumer electronics
D. No product safety components are high-risk

Correct Answer: B

Explanation:

- **Why B is correct:** The training identifies high-risk categories including: "Product safety: AI as a safety component of regulated products (e.g. toys, machinery, medical devices, aviation, vehicles, railways)."
- **Why A is incorrect:** High-risk designation isn't limited to software. It includes AI as safety components in physical products across multiple sectors.
- **Why C is incorrect:** While some consumer electronics might contain high-risk AI, the high-risk category specifically includes AI in regulated product safety components across many sectors, not just consumer electronics.
- **Why D is incorrect:** The training explicitly identifies product safety components as one of two subcategories of high-risk AI systems.

Question 30

According to the EU AI Act, when do rules for general-purpose AI (GPAI) take effect?

A. 6 months after the Act entered into force
B. 12 months after the Act entered into force (2 August 2025)
C. 24 months after the Act entered into force
D. 36 months after the Act entered into force

Correct Answer: B

Explanation:

- **Why B is correct:** The training states: "12 months out (2 August 2025): rules apply that relate to: Notified bodies (Chapter III, Section 4), GPAI (general-purpose AI), governance, confidentiality, penalties."
- **Why A is incorrect:** 6 months is when prohibitions on unacceptable risk AI take effect, not GPAI rules.
- **Why C is incorrect:** 24 months is when most remaining obligations apply generally, but GPAI rules specifically take effect at 12 months.

Narahari

- **Why D is incorrect:** 36 months represents the outer range of the implementation timeline, but GPAI rules take effect at 12 months.

End of Module 6 Advanced Practice Test

Scoring Guide:

- **27-30 correct:** Exceptional understanding - exam-ready
- **24-26 correct:** Strong understanding - minor review needed
- **21-23 correct:** Good foundation - review risk categories and obligations
- **18-20 correct:** Adequate knowledge - focus on Articles and timelines
- **Below 18:** Review Module 6 thoroughly, especially prohibited practices and high-risk requirements

Key Concepts to Master for Module 6:

1. **Four Risk Categories:**
    - Prohibited (unacceptable)
    - High risk
    - Limited risk (transparency)
    - Minimal/no risk
2. **Prohibited AI Practices:**
    - Social credit scoring
    - Emotion recognition in workplaces/education
    - Exploiting vulnerabilities
    - Behavioral manipulation
    - Untargeted facial scraping
    - Real-time biometric ID by law enforcement (with limited exceptions)
3. **Key Roles:**
    - Provider (developer)
    - Deployer (user)
    - Importer
    - Distributor
4. **High-Risk AI Requirements (Articles 9-15):**
    - Article 9: Risk management system
    - Article 10: Data governance

Narahari

- Article 11: Technical documentation
- Article 12: Record-keeping/logging
- Article 13: Transparency/instructions
- Article 14: Human oversight
- Article 15: Accuracy/robustness/cybersecurity

5. **Provider Obligations:**
    - QMS (Article 17)
    - Conformity assessment
    - EU database registration
    - Serious incident reporting
    - Post-market monitoring
6. **Deployer Obligations:**
    - FRIA (Fundamental Rights Impact Assessment)
    - Proper use
    - Human oversight
    - Performance monitoring
7. **GPAI Requirements:**
    - Technical documentation
    - EU representative
    - Copyright compliance
    - Training data summaries
    - High-impact: additional risk assessment, red-teaming, energy reporting
8. **Penalties:**
    - Prohibited AI: €35M or 7% of global turnover
    - Other noncompliance: €15M or 3% of global turnover
9. **Implementation Timeline:**
    - 6 months: Prohibitions
    - 12 months: GPAI, notified bodies, governance
    - 24-36 months: Most other obligations
10. **Key Requirements:**
    - AI literacy (Article 4)

Narahari

- Conformity assessments
- Public EU database registration
- 6-month log retention
- Serious incident reporting
- Deepfake labeling

Study Tips:

- Memorize the four risk categories and examples
- Know prohibited practices and why they're banned
- Understand Articles 9-15 requirements for high-risk AI
- Learn the difference between provider and deployer obligations
- Know penalty amounts and what triggers highest penalties
- Understand GPAI vs. high-impact GPAI requirements
- Memorize implementation timeline dates
- Practice distinguishing high-risk from limited-risk systems

Good luck with your AIGP certification!

Narahari
